DETAILED ACTION

1. Applicant's response filed on 08/29/2006 has been fully considered. The Double Patenting rejection and the 35 USC 103 rejection over Kai in view of Hirose and Ryu have been withdrawn in view of Applicant's amendments and comments.

2. Claims 2-4 are amended, and claims 1-5 are pending.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kai et al. (JP 2002-088679) in view of Matsumura et al. (JP 2002-161494) and Ryu et al. (US 2001-288690).
- 5. Kai discloses a coated paper for gravure printing comprising a coated layer having an adhesive and a pigment on a base paper, wherein kaolin having a particle size in a range of 0.4-4.2 gm is contained in an amount of 65% or more based on the volume, is contained as the pigment in an amount of 50 parts by weight or more per 100 parts by weight of the pigment (abstract). Kai further discloses that the organic pigment may be contained in the coating composition [0014]. Kai does not disclose hollow pigment as the organic pigment.

•

Application/Control Number: 10/527,328

Art Unit: 1774

6. Matsumura teaches a gravure printing paper containing a paper and a coating layer containing hollow organic pigment provided on the paper (abstract), wherein the hollow pigment has a particle size of 0.2-0.5 um [0011].

Page 3

- 7. Kai and Matsumura are analogous art because they are from the same field of endeavor that is the gravure coated paper art. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the hollow organic pigment of Matsumura with the invention of Kai so as to improve the glossiness property of the layer, provide precise coating and improve drying property of the layer ([0012] of Matsumura).
- 8. With respect to claim 3, at the time of the invention, it is notoriously known to add amorphous silicate in the paper so as to control flexibility while retaining mechanical strength (see [0010] of Ryu).
- 9. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kai et al. (JP 2002-088679) in view of Sasaki et al. (JP 11-279990) and Ryu et al. (US 2001-288690).
- 10. Kai discloses a coated paper for gravure printing comprising a coated layer having an adhesive and a pigment on a base paper, wherein kaolin having a particle size in a range of 0.4-4.2 gm is contained in an amount of 65% or more based on the volume, is contained as the pigment in an amount of 50 parts by weight or more per 100 parts by weight of the pigment (abstract). Kai further discloses that the organic pigment

Application/Control Number: 10/527,328

Art Unit: 1774

may be contained in the coating composition [0014]. Kai does not disclose hollow pigment as the organic pigment.

- 11. Sasaki teaches a gravure printing paper containing a paper and a coating layer containing hollow organic pigment provided on the paper (abstract), wherein the hollow pigment has a particle size of 0.4-2.0 um [0016].
- 12. Kai and Sasaki are analogous art because they are from the same field of endeavor that is the gravure coated paper art. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the hollow organic pigment of Sasaki with the invention Kai so as to enhance the ink receiving property of the layer.
- 13. With respect to claim 3, at the time of the invention, it is notoriously known to add amorphous silicate in the paper so as to control flexibility while retaining mechanical strength (see [0010] of Ryu).
- 14. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kai et al. (JP 2002-088679) in view of Hayashi et al. (JP 06-235194) and Ryu et al. (US 2001-288690).
- 15. Kai discloses a coated paper for gravure printing comprising a coated layer having an adhesive and a pigment on a base paper, wherein kaolin having a particle size in a range of 0.4-4.2 gm is contained in an amount of 65% or more based on the volume, is contained as the pigment in an amount of 50 parts by weight or more per 100 parts by weight of the pigment (abstract). Kai further discloses that the organic pigment

Art Unit: 1774

may be contained in the coating composition [0014]. Kai does not disclose hollow pigment as the organic pigment.

- 16. Hayashi teaches a gravure printing paper containing a paper and a coating layer containing hollow organic pigment provided on the paper (abstract), wherein the hollow pigment has a particle size of 0.5-3.0 um [0004].
- 17. Kai and Hayashi are analogous art because they are from the same field of endeavor that is the gravure coated paper art. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the hollow organic pigment of Hirose with the invention of Kai so as to enhance the printing property and glossiness of the layer.
- 18. With respect to claim 3, at the time of the invention, it is notoriously known to add amorphous silicate in the paper so as to control flexibility while retaining mechanical strength (see [0010] of Ryu).

Response to Arguments

19. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

20. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Betelhem Shewareged whose telephone number is 571-272-1529. The examiner can normally be reached on Mon.-Fri. 8:00AM-4:30PM.

Application/Control Number: 10/527,328 Page 6

Art Unit: 1774

21. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rena Dye can be reached on 571-272-3186. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

22. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

B.S. November 11, 2006.
